... I've been a user of Exact prototyping for a couple years now, and decided I wanted to try it again since I ran into issues during a recent project, as well as the upgrade to version 11. I recently set up a new workstation, running Windows 8.1 and a Lenovo x230 with an Intel i7 processor, 16 gb ram, and GTX 960m graphics card. A 2x2 27" Asus Triniton, and an Asus NUC form factor. That when saving files to the network drive, they end up with the.part extension on the end. That is, when I save a.sldpart file from SolidWorks, and save it to a network drive, the file name ends in.part. Is this an issue, and if so, can it be fixed? 3. I had to manually install the software on another Windows machine that has an Intel i7 processor, and found that sometimes the screen would lock up, and I would have to close the application, and open it again. I believe this is a known issue with the software, and is normally remedied by uninstalling the software and reinst 82157476af
